

TOP TROCK fire
patented drying systems

The Professional Answer to your Humidity Problems.

For many years TOP TROCK counts among the Leading Producers of Drying systems.

For many years Top Trock has become a prime supplier of drying systems worldwide. The Navy, Coast Guard, Armed Forces, Police, Ship Yards, Ship Owners, as well as Off shore Platforms, Industry, Fire Brigades and sport facilities are some of the customers using this patented drying systems to dry their various kinds of work wear and protective clothing.

Top Trock's highly efficient drying method uses warm air which is conducted through continuous stainless steel tubes and emerges via nozzles directly into the garment to be dried. As well as offering maximum levels of hygiene, the system guarantees gentle handling of clothing and therefore extends the useful life.

Top Trock offers a wide range of drying systems for boots, gloves, jackets, trousers and coveralls, as well as survival, diving, chemical protection suits and breathing masks.

Due to its modular nature this drying system is extraordinarily suitable for new builds and existing locations. Also it can be easily be set up and extended. For on-board application and offshore Top Trock manufactures systems in seawater resistant stainless steel (316).

Due to their modular design and build, the drying systems can be easily extended
